

# Striker Sideloading an APP

## 1.

Download the APK file for the app you are wanting to install onto your PC.

*\*Note: in most cases you can download the APK directly from the software provider's site. There are also several APK download sites that make these APKs available. For example, [www.apkmirror.com](http://www.apkmirror.com) and [www.apkpure.com](http://www.apkpure.com).*

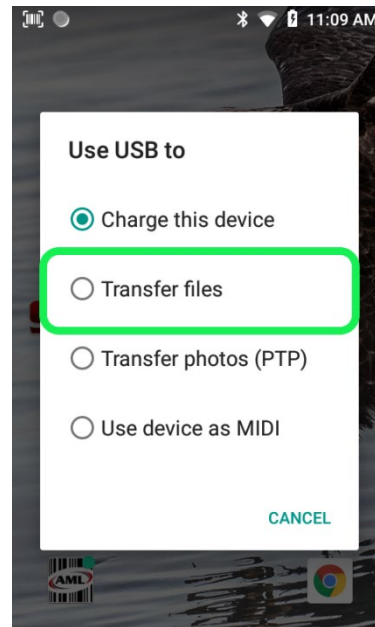

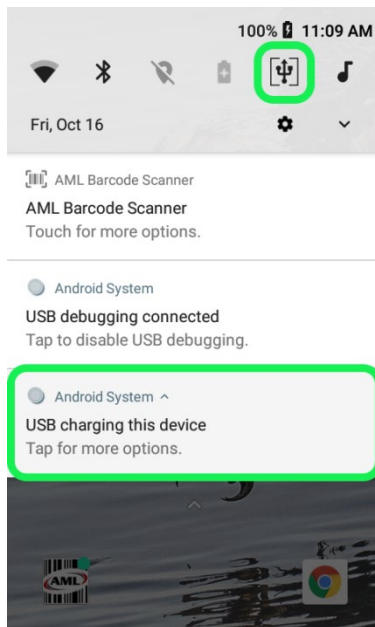

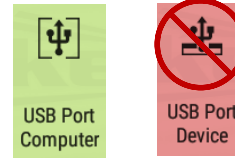

## 2.

- Place the Striker in the charging cradle.
- Connect the cradle to a PC using a USB cable.
- Swipe down from the top of the screen.

### 3.

- Verify **USB Port** is set to **Computer**
- Tap **USB charging**
  - o select **File Transfers**.

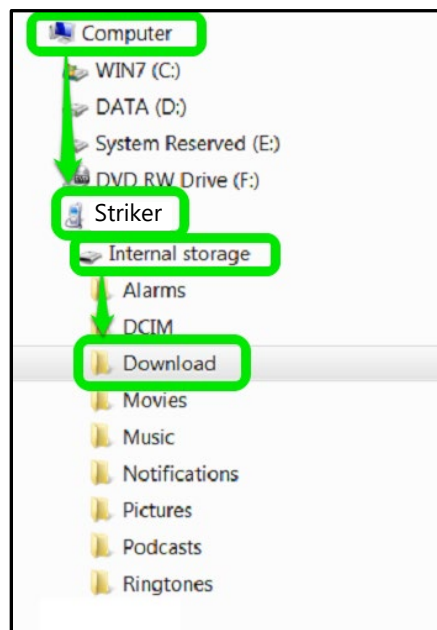

### 4.

Open *Windows File Explorer* on the PC.

(\*note: this can also be performed using a thumb drive inserted into the charging cradle)

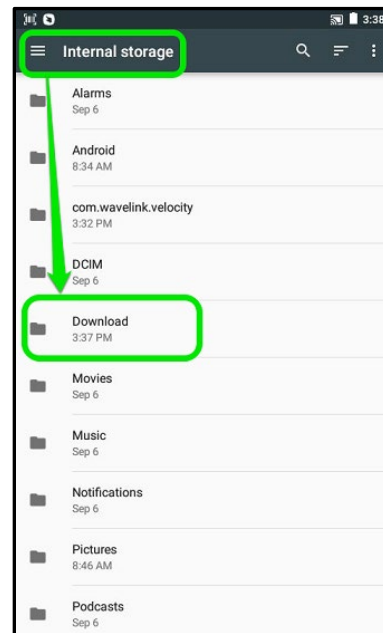

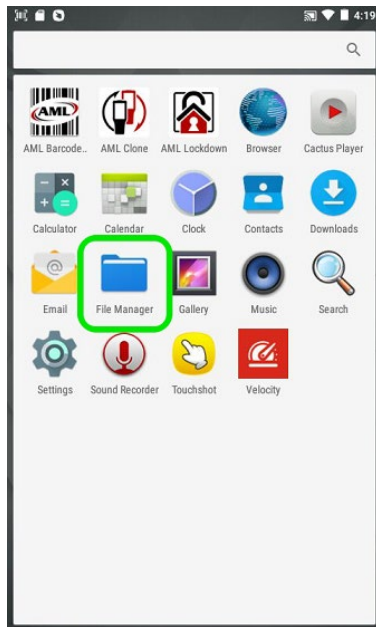

Copy your apk file(s) to: **Striker > Internal storage > Download**.

## 5.

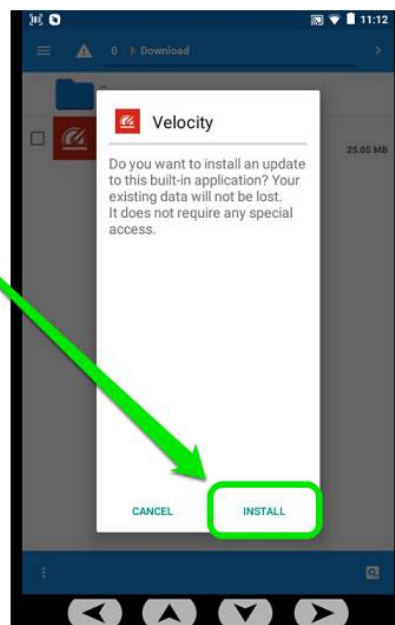

Install the APK on the Striker using the *File Manager* app:

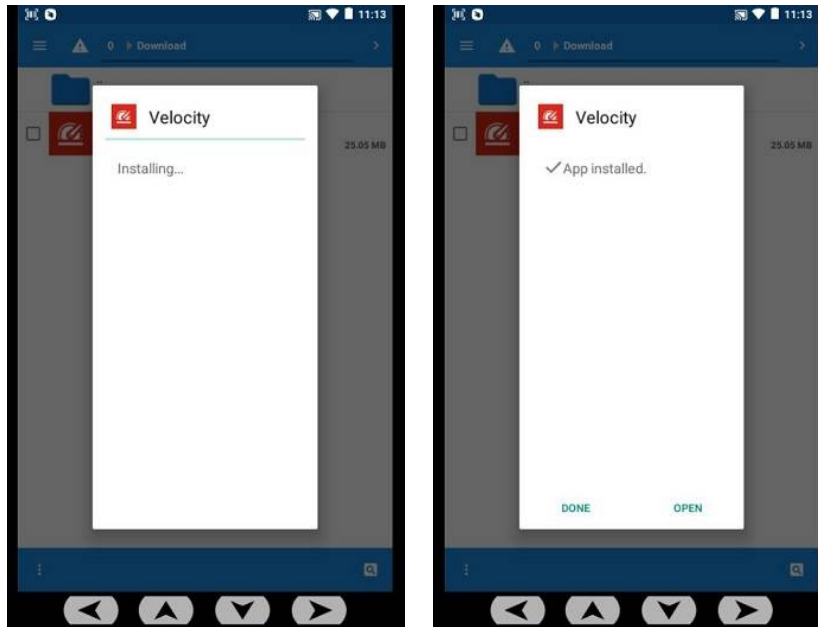

- Tap the *File Manager* app to open
- Navigate to the **Download** folder

## 6.

Tap on the APK file and choose **Install**.

*\*Note: Once you have a unit configured the way you want it, the AML Clone app will allow you to make a clone file for your device (which will copy/clone all settings, applications, files. etc.) to be deployed onto your other devices. The AML Clone app is not just a backup and restore function, but a true cloning utility. The encrypted clone file can then be used to quickly image other devices with all the same applications, settings and credentials. See \*AML Cloning App\* document.*
