LDX10 Batch Data-Collection Solution

The Objective

A small manufacturing company was looking for a better way to keep their inventory updated, but didn't want to spend thousands of dollars on expensive equipment or software.

The company already had existing accounting software, but they wanted an easier way to keep track of all of the components and parts needed to manufacture their products. After much research, they decided to give AML's batch handheld computer a chance.

The Solution

The LDX10 handheld computer comes preloaded with a collection of common barcoding applications, called DC Suite. The handheld computer also comes with DC Console, a program generator that allows users to modify current applications or create new ones. It was these tools that allowed the company to improve the efficiency with which they recorded and transferred inventory.

This company wanted to be able to scan a barcode that identified the part number and then prompt the employee for additional needed information. The LDX10's free program generator, DC Console, offered the perfect solution. They were able to customize an application that would collect all of the information they needed: part number, quantity, warehouse ID, and serial numbers (if applicable).

After all of the information was gathered, the information was uploaded and saved as a .csv file, then imported into the accounting software for processing.

Summary

The manager of operations remarked, "The LDX10 has made inventory much less intimidating. The whole process was easy to implement and definitely sped the process up, which freed up time to work on other tasks."

Since they had so much success with the LDX10 and their inventory processes, they are now starting to look for other aspects of their operations where the LDX10 and DC Suite can save them time and money.

About AML LDX10

The **LDX10** is a batch data-collection solution comprised of the LDX10 handheld computer, **DC Suite** collection of barcode-centric applications and the **DC Console** program generator.

Like all hand-held AML products, the LDX10 is engineered, manufactured, and serviced in the **U.S.A.** It is specifically designed for light-duty commercial applications where acquisition cost is a driving factor when selecting a data collection device.
