

Purpose-Built Apps

The **AML Lockdown Utility** gives administrators the ability to restrict user access to only specific applications necessary to the user.

Use the **AML Barcode Service** to configure the behavior of the barcode scanner. Enable or disable symbologies, add prefixes or suffixes, change the “good read” sound, or enable AML’s “ScreenFlash” technique to provide visual confirmation of good scans or bad reads.

DC Suite is a collection seven pre-written applications for completing basic inventory tasks including inventory counts, asset tracking, and more. However, modifying existing applications or writing completely new ones from scratch is easy with DC Suite’s program generator, **DC Console**.

AML Setup is a device configuration software designed to expedite the AML device configuration process using a preconfigured barcode or QR code. AML Setup Console is a desktop application used to modify device settings and create different configurations.

AML Device Manager is mobile device management web application designed to give administrators remote accessibility to their devices. Admins can monitor individual device activity, modify device settings, and provide remote support. License purchase required following demo period.

AML’s **AppLync Browser** is a “locked-down” web browser ideally used by organizations with the intention of using web-based applications on their hardware devices in the most secure way possible. License purchase required.

DC Works is a no-code platform used to create custom apps for workflow automation. Start from scratch, use templates, or let us create the app for you. Deploy apps on any device: mobile, desktop, wearables, and more. License purchase required.

Purpose-Built Apps

The Android default keyboard consumes over half of the viewable screen space covering up valuable content. **AML Keyworx** solves this problem with a dockable keyboard that can be customized to fit specific application requirements.

BT Connect is an app designed to connect AML wireless ring scanners with AML mobile, wearable and vehicle mount computers. The barcode scanner settings can be configured in the AML Barcode Service app. Users simply scan a barcode to connect the two devices and the settings will be applied.

GlinkVT for VT100 and VT220 terminal emulation is preloaded and pre-licensed on select AML devices including the Scepter Pro Mobile Computer, StrikerX Mobile Computer, Dragonfly Wearable Computer, and Firebird Vehicle Mount Computer.

AML's **StoreScan** price-checking software is a simple, yet powerful application that allows retailers of all types and sizes to offer the convenience of price verification to their customers. Eliminate the frustration of missing or incorrect pricing by offering easy, self-service functionality using any of the AML kiosks. License purchase required.
