

Easily convert your health or fitness club to contactless check-in using barcode scanning

Does your fitness center have a touch-based system to check-in? Examples of this include typing in a phone number into a keypad or using a biometric sensor to read fingerprints. Although this system may be cost-effective, now is the time to introduce new solutions that are contactless as a safer alternative.

Barcode scanning has been widely adopted by larger fitness centers for its convenience and ease of use. Members are able to scan their unique barcode directly from their phone. This quick and simple process eliminates the unsanitary touch-based nature of fingerprint readers and keypad entry.

AML's Phoenix self-service kiosk is an easy replacement for keypads and biometric sensors. AML can provide assistance interfacing with your current club membership software. Contact an AML representative today to start your transition to **contactless check-in**.
