

The StoreScan price checking software is an easy-to-use, multi-platform price checking system designed for use with all AML kiosks. StoreScan utilizes a centralized web service to provide product information real-time to all AML kiosks running StoreScan. With the ability to customize the user interface with their logos, color schemes and marketing promotions, retailers can easily configure StoreScan to provide a cohesive look within their store.

Easy Setup

Setting up StoreScan on an AML kiosk is very simple. Using the StoreScan Configurator application, users can generate configuration barcodes and/or create a zip file with all configuration information and files needed to easily set up StoreScan on an AML kiosk.

Smart Layouts

StoreScan has several different display options depending on the data returned from the web service. Layouts can range from a basic setup displaying just the price and product name to more complex configurations including the name, price, description, a product image and sales information. StoreScan is also smart enough to support promotions where if the actual price is lower than the retail price, then the SALE layout will highlight the difference.

<p>George Ombre Stripe Tie</p> <p>\$12.00</p> <p>Item: 682875047672</p>	<p>Philips® Avent Baby Bottle</p>  <p>\$6.99</p> <p>Item: 07502004457</p>	<p>Men's Fashion Crew Socks</p>  <p>\$3.00 4.99</p> <p>40% OFF</p> <p>Item: 070010636001</p>

Simple or Multi-store StoreScan Server

Simple or Multi-store StoreScan Server also has two operational modes: Simple single server mode and Multi-store server mode. The Simple mode is for retailers who have one universal pricing structure for all stores or plan to put a server in every store. The Multi-store mode is for those who have one server serving multiple stores that each have their own pricing information and/or promotions.

Customizable Slideshow

StoreScan has a fully customizable slideshow that allows users to set exactly how long each “slide” will be displayed. Video is also available with the AML Monarch+ and Firebird kiosks. Users can setup any of the two AML kiosks to remotely update the slideshow content in a 24-hour interval. Storescan will automatically resize any images that are larger than the display so that users can setup one slideshow to use across all AML kiosks.

Compatibility

StoreScan is compatible with all AML kiosks and can operate simultaneously on the same network utilizing the same web service. Each model of kiosk featured below differ in size and operating system.
