The Striker mobile computer will run all your existing DC Suite apps with absolutely no modifications.

Just connect the Striker to DC Console to download your suite apps, and as always, support is just a phone call away.

Goodbye, old friend.

After 12 years, it's time for our popular LDX10 mobile computer to retire.

12 years is a long lifespan for any electronic device these days, but the components necessary to keep the LDX10 are simply no longer available.

But don't despair, our Striker mobile computer comes with the same **DC Suite** software as the LDX10, with some added features and benefits like Wi-Fi capability and a swappable battery. It can also connect with WMS and ERP systems to run enterprise applications. The Striker can do it all!

Our Striker Kit (**M7712-1600-46IDCS**) includes our Striker mobile computer along with an inline charger. The Striker also has an expansive list of available accessories as well.

Contact us for more information on the Striker mobile computer.
